I. Printing Calibration

Four lines of varying feed rates were tested and calibrated for each material. The material shown in the picture, Grape Jelly had an optimal feed rate of 500 mm/min (2nd line). 5 lines are actually in the G-Code test, but the first line did not print due to the low feed rate. This was performed for each material, which gave an indication of the parameters for each case.

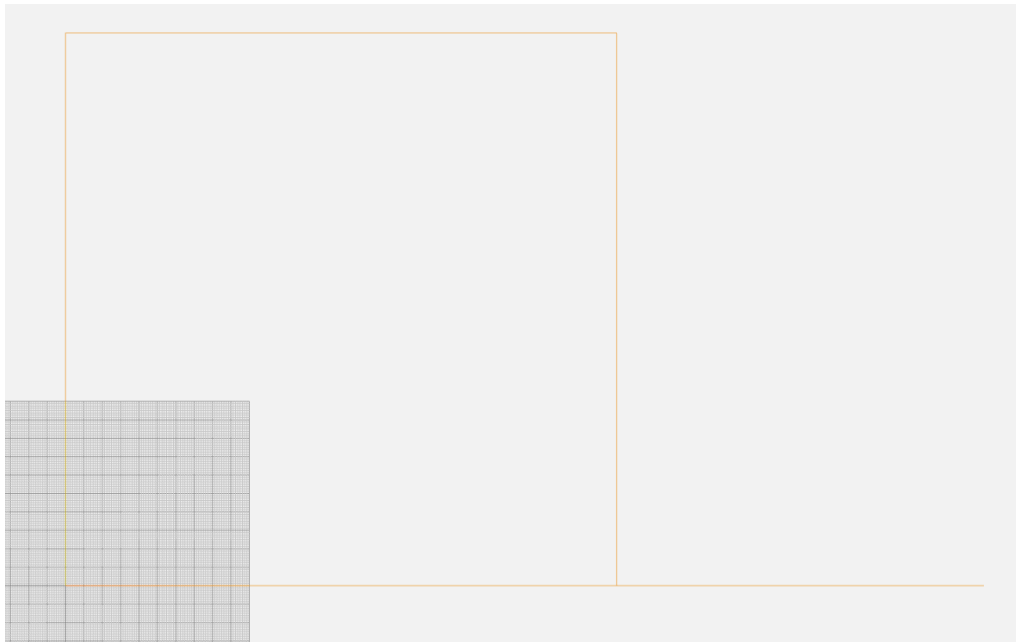

II. Printed Square Photo (Presubmission 1)

A. Print Photo:

B. Materials: Cream Cheese

C. Simulated Path:

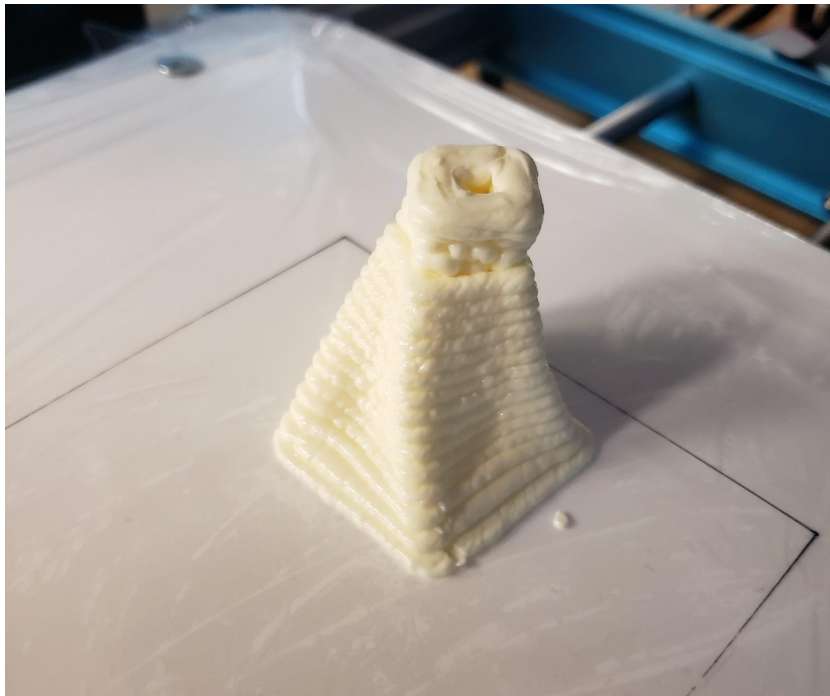

D. As per instructions, python source code omitted for the square.

E. G-Code:

A. Screenshot of Previous Submission History

The screenshot shows a web interface for a course named 'Food Printing 40'. The user is 'Steve Cao'. The interface includes a sidebar with navigation links: Account, Dashboard, My Courses, Courses, Groups, Calendar, Inbox, History, and Help. The main content area is titled 'Submissions' and contains a search bar, a file list, and a progress bar. The file list shows several submissions, with the most recent one, 'Food printing submission 3.docx.pdf', highlighted. The progress bar indicates that 0% of 314.6 MB has been used.
