MECE 4606 DIGITAL MANUFACTURING

Laser Cut Box

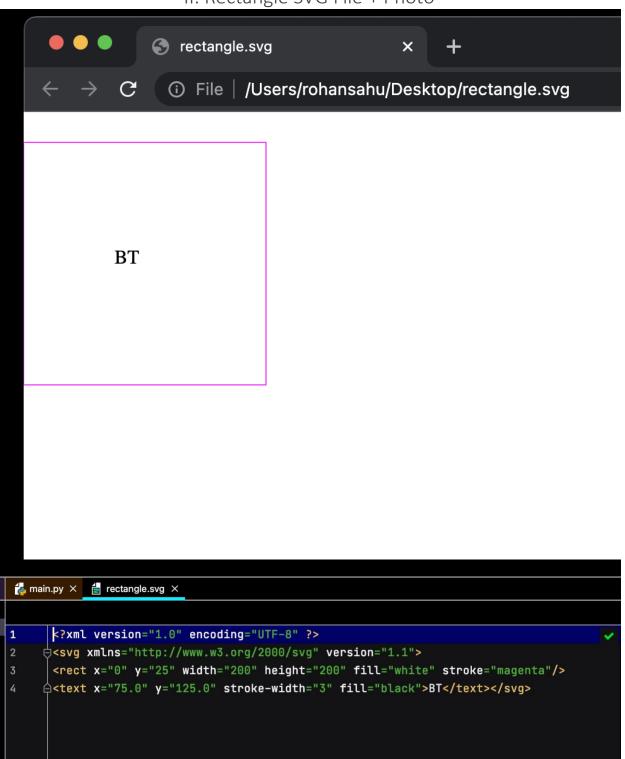

Rohan Sahu (rzs2120), Brock Taylor (btt2115)

February 12th: 11:59 PM

96 Grace Hours Before Submission, +24 Hours Gained, 120 Hours After Submission

II. Rectangle SVG File + Photo

III. Description of Software

The software starts by requesting input for all information about the box from the user (length, width, height, material thickness, top text, front text, and the number of dovetails). It then loops from 0 to 5 to create each side of the cube, saving the current position as x, y for each step and updating as necessary.

The squares themselves for the sides are made through a method called make_square() which takes input parameters regarding which type of square it is. make_square() differentiates between type 1 (front and sides) and type 2 (top and bottom) squares. The way our dovetails work, the front and sides have identical orientation of dovetails (3 in and 1 out). For the top and

bottom, all dovetails face out. Additionally, the top is a special case, as it functions as a lid by removing the holes for the fasteners. The program accounts for this by an additional parameter called top.

The program splits the process of making the dovetails of each square into x and y with directional inputs through a parameter called sign (valued 1 or -1). Additionally, by including make_dovetails_x and make_dovetails_y, it allows us to call make_dovetail_x or make_dovetail_y multiple times for smaller lengths depending on the number of dovetails requested by the user.

For making the dovetails themselves, it takes the current position as an input, and writes in xml to construct a dovetail which splits the input width into 3 sections. On the first step of making the dovetail, if the dovetail is on the bottom (sign = -1), then it makes rectangles for fasteners using the following parameters:

```
X = x - (1 / 2) * wid - screw_rad / 2 - 2
Y = y - screw_len, screw_rad + 4
Width = screw_rad + 4
Height = screw_len - material_thickness
```

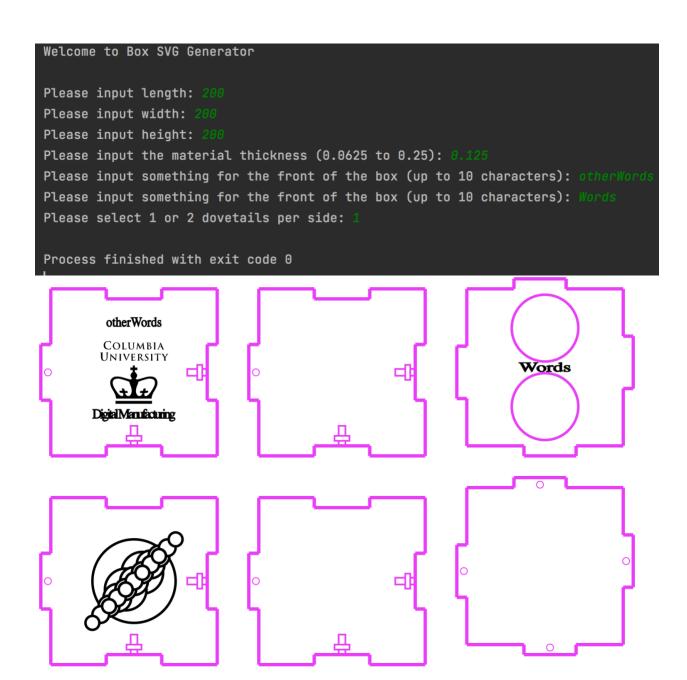

In which x, y are the current position saved by the program; screw_rad and screw_len are global constants for the dimensions of the screw; -2 and +4 are included as tolerances. The other fastener cuts have similar calculations.

The program includes the Columbia Logo by reading a .svg file of the logo from the same file directory, saving the file as a string, outputting that string into the .svg output file for the program, and adding a <g transform> script to move the logo and scale it. Some formatting changes needed to be made to the logo file in order for this to work.

Further description can be found in the in-line comments/documentation included in the code.

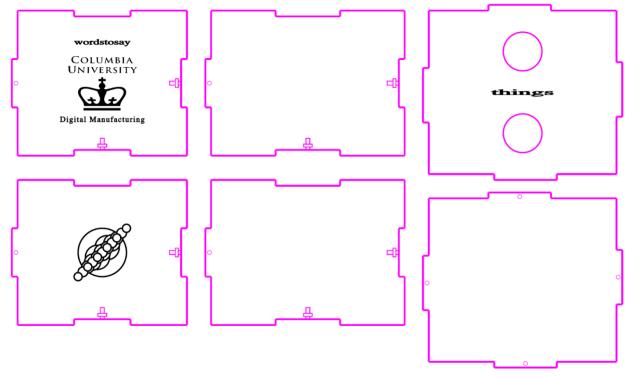

IV. Examples of input and output

```
Welcome to Box SVG Generator
Please input length: 300
Please input width: 200
Please input height: 200
Please input the material thickness (0.0625 to 0.25): 0.0625
Please input something for the front of the box (up to 10 characters): stuff
Please input something for the front of the box (up to 10 characters): things
Please select 1 or 2 dovetails per side: 2
Process finished with exit code 0
      stuff
     COLUMBIA
UNIVERSITY
                                                               things
    Digital Manufacturing
```

```
Please input length: 4
You entered an invalid length. Please input between 200 and 400: 400
Please input width: 350
Please input height: 300
Please input the material thickness (0.0625 to 0.25): 0.125
Please input something for the front of the box (up to 10 characters): wordstosay
Please input something for the front of the box (up to 10 characters): things
Please select 1 or 2 dovetails per side: 1

Process finished with exit code 0
```

```
Welcome to Box SVG Generator

Please input length: 200

Please input width: 300

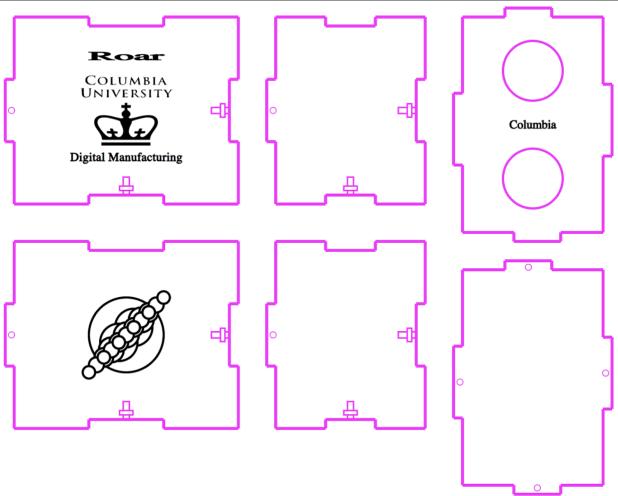

Please input height: 250

Please input the material thickness (0.0625 to 0.25): 0.125

Please input something for the front of the box (up to 10 characters): Roar

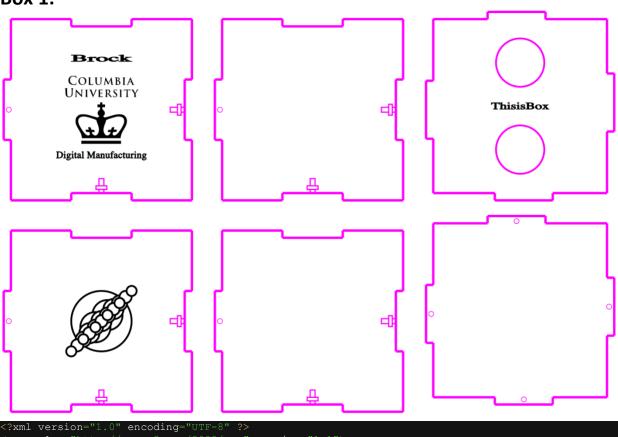

Please input something for the front of the box (up to 10 characters): Columbia

Please select 1 or 2 dovetails per side: 1
```

V. Print-out of SVGs and Boxes

Please input length: 100
You entered an invalid length. Please input between 200 and 400: 500
You entered an invalid length. Please input between 200 and 400: 400
You entered an invalid width. Please input between 200 and 400: 400
Please input height:
Please input the material thickness (0.0625 to 0.25): 0
You entered an invalid thickness. Please input between 0.0625 and 0.25 0.3
You entered an invalid thickness. Please input between 0.0625 and 0.25 0.25
Please input something for the front of the box (up to 10 characters):
Invalid length. Please input 1 to 10 characters:
Please input something for the front of the box (up to 10 characters): asdfjkljasdfjkl;
Invalid length. Please input 1 to 10 characters: asdf
Please select 1 or 2 dovetails per side:
Invalid number. Please select 1 or 2 dovetails per side: 0
Invalid number. Please select 1 or 2 dovetails per side: 1
Process finished with exit code 0
```

- 4. 10pt A description of the software you wrote calculation steps, formulas, conditions.
- 5. 20pt Four examples showing input parameters and output flat pattern.
- 6. 20pt Printout of the two SVG files and photo of boxes they produced
- 7. 10pt User-specified text engraved on the top of the box
- 8. 10pt User-specified text engraved on the front of the box
- 9. 10pt Columbia logo and "Digital Manufacturing" engraved on the front of the box
- 10. 10pt A fractal engraving generated by the program embedded on one side of the box
- 11. 10pt a lid to cover the box
- 12. 10pt Any additional parameter accommodated by software:

Software allows for specification of number of dovetails desired

13. 10pt box image posted on Ed at least 24h day before the deadline (show screenshot)

Box images Rohan Sahu & Brock Taylor #99

Hi everyone,

We've attached some pictures of our boxes below:
